

RAZORTHORN

Leaders in Cybersecurity Consultancy

Defending businesses against cyber attacks since 2007

We are Razorthorn Nice to meet you

We've been defending UK businesses against cyber threats since 2007. In that time, we've worked with organisations across financial services, retail, transport, legal, professional services and beyond - helping them understand their risks and build robust defences.

Our team is made up of senior consultants with many years' experience who understand that cybersecurity isn't just about ticking boxes. It's about protecting what matters to your business.

We are experts in our field and have been recognised by Gartner as a market leader in the delivery of PCI DSS QSA services. Whether you need strategic advice, rigorous testing or continuous monitoring, we bring the same approach: practical expertise, clear communication and a genuine partnership mentality. We're here to help you make informed decisions, not just hand you a report.

Cybersecurity Consultancy

Strategic cybersecurity advice

Not every organisation needs a full-time CISO. But you do need someone who understands your risks and helps you make the right decisions.

Our consultants bring years of hands-on experience. We help you build practical security programmes, meet compliance requirements and get things done without the jargon.

What we can help with:

- Compliance assessments and readiness (including DORA, ISO 27001, NIS2, Cyber Essentials)
- Security strategy and roadmaps
- Policy and procedure development
- Third-party and supply chain risk
- Incident response planning
- Security awareness training
- vCISO services

Cybersecurity Testing

Find your vulnerabilities before attackers do

Our CREST-accredited testing services show you where you're exposed. We test your systems the way real attackers would, then explain what we found and what you should do about it.

Our consultants understand business context and deliver findings you can actually use, with clear priorities and practical remediation advice.

What we can help with:

- CREST Accredited Penetration Testing
- Security Control Assessment
- Vulnerability Assessment
- Cloud Security Reviews
- Social Engineering Testing
- Red Team Assessment
- Purple Team Assessment
- Physical Red Teaming

Razor's Edge

Continuous security monitoring

Traditional penetration testing gives you a snapshot in time. Razor's Edge gives you continuous visibility.

Our CTEM platform monitors your systems 24/7, identifying vulnerabilities as they emerge. Every finding is verified by our team of security analysts to eliminate false positives, so you only focus on genuine threats.

What you get:

- Continuous monitoring of your attack surface
- Expert verification of all vulnerabilities
- Real-time alerts when issues are found
- Clear prioritisation based on your business risk
- Evidence that fixes have worked

The outcome: Ongoing confidence in your security posture, not just an annual tick box.

Our Technology Partners

Our technology vendor partnerships allow us to deliver comprehensive protection without the complexity of managing multiple providers, along with a preferential price point.

Our approach combines our technical expertise with a practical understanding of your organisation, ensuring you get security solutions that actually work for you. We evaluate, implement and support these technologies (as required) on your behalf, acting as a single point of contact.

We work with partners specialising in a wide range of areas including:

- Application Security
- Data Security Management
- Disaster Recovery
- Email Security
- Governance, Risk & Compliance
- Managed Security Services
- Network Security
- Ransomware Protection
- Security Awareness Training
- SIEM
- Threat Intelligence
- Vulnerability Management
